

# Titus Polish Rod

## Wrench

Titus Polish Rod Friction wrenches are designed to make up or breakout delicate chrome polished rods without marring or damaging rod surfaces

### Features & Design

- High quality steel construction.
- Ability to ratchet after being applied to the polish rod, preventing frequent wrench adjustment and removal.
- Precision-machined jaw provide friction gripping around the complete circumference of the polish surface rod.
- Each piece of the gripping portion is heat treated to assure years of dependable service.
- Eliminates pipe wrench scaring on polish rod ensuring no damage to polish rod or costly stuffing box repairs and environmental damages due to leaks.
- Will still function if surface of polish rod is unclean or coated with production debris.
- Available in all standard size polish rods.
- Patent protected
